01 PROFILE

C++/Qt developer with production experience shipping desktop tooling used daily by a 30-seat engineering bureau. Grew from contractor to Lead Programmer in nine months; own the tech stack, scoping and delivery. Building a game engine in C++/Qt/QML on the side — moving into game development (tools / gameplay).

02 PERSONAL GAME PROJECTS

Donut-Engine — game engine built from scratch, solo

- Built an OpenGL renderer and a glTF 2.0 import pipeline (tinyglTF): meshes and PBR materials — base color, metallic-roughness, normal maps.
- Integrated the engine into Qt Quick through a custom QQuickItem render hook; modular core / renderer / quick architecture.

Technologies: C++17, Qt 6, QML, OpenGL, glTF 2.0, CMake · [repo link](#) — [TBA](#)

CyberHockey2077 — real-time 1v1 air hockey, Telegram Mini App

- Built client-server state sync over WebSocket with an AI referee layer.

Technologies: React, TypeScript, WebSocket, Node.js · [link](#) — [TBA](#)

orch-bot — production Telegram LLM bot

Provider failover chain (OpenRouter), SQLite; 887 automated tests across the platform.

03 EXPERIENCE

Sed-Pro LLC

Barnaul · Dec 2024 — present

Software division of a working architecture & engineering bureau.

- Lead Programmer** Aug 2025 — present
- Programmer** Dec 2024 — Aug 2025
- Own tech stack, scoping and deadlines; hands-on lead with 1–2 engineers reporting to me.
- Built an SQL-first platform ("no-code, SQL-code"): forms, widgets and button logic are defined in MySQL, the Qt Widgets client renders them — screens are reshaped on the fly, without C++ rebuilds.
- Automated the order-to-delivery pipeline for 30 designers (incl. chief project engineers): automatic project assembly, no manual file handoff — **~20% faster project turnaround**.
- Designed sheet-level file versioning (DWG / XLSX / PDF) and electronic document flow.

Technologies: C++, Qt Widgets, MySQL

Industrial automation plant (NDA)

Feb — Mar 2024

Fuel-station tanker systems · Software Engineering Intern

- Programmed and configured microcontrollers for fuel-tanker equipment; migrated a production server to Astra Linux (C#). Sensitive infrastructure under NDA.

04 SKILLS

C/C++	Qt Widgets	QML	OpenGL	
CMake	STL	Boost	MySQL	MS SQL
Git	C#	Data structures & algorithms		
Astra Linux	Unreal Engine (study)			

05 EDUCATION

Altai State University College 2023
Information Systems and Programming — Barnaul

06 ACHIEVEMENTS

Laureate — Altai Krai Professional Skills Olympiad, CS & engineering track (2023) — [article](#), [asu.ru](#)

Diploma II degree — Regional IT olympiad RSO-IT'2023 (Gorno-Altaysk SU)

Paper "Evolution of Point Defects in an FCC Crystal" — VI Int. Research & Practice Conference, Moscow 2023; indexed in RSCI ([eLibrary.ru](#))

Hackathon Barnaul — participant (2021)

07 CERTIFICATES

C++ Programming	2022
Introduction to Programming (C++)	2022
Game Development with Unreal Engine	2022
Gamification: Introduction	2022

08 LANGUAGES

Russian	native
English	B2, upper-intermediate
