

Vladislav Klimentev

C++ Developer

middle Qt/C++17 · Unreal Engine — junior (self-study)

Barnaul, Russia — open to relocation / remote

Email: klimentev.vlad@gmail.com — GitHub: github.com/vetnem1lk

Portfolio: me.cryzothic.tech — Phone: +7 913 950-73-77

SUMMARY

C++/Qt developer with production experience shipping desktop tooling used daily by a 30-seat engineering bureau. Grew from contractor to Lead Programmer in nine months; own the tech stack, scoping and delivery. Building the Donut-Engine game engine (C++17, Qt, QML, OpenGL) and the real-time game CyberHockey2077 on the side. Looking for a new position in game development (tools / gameplay, C++ / Unreal Engine).

PROJECTS

Donut-Engine — game engine built from scratch, solo. C++17, Qt 6, QML, OpenGL, glTF 2.0, CMake

- Built an OpenGL renderer and a glTF 2.0 import pipeline (tinyglTF): meshes and PBR materials — base color, metallic-roughness, normal maps.
- Integrated the engine into Qt Quick through a custom QQuickItem render hook; modular core / renderer / quick architecture.

CyberHockey2077 — real-time 1v1 air-hockey Telegram Mini App. React, TypeScript, WebSocket, Node.js

- Built client-server state sync over WebSocket with an AI referee layer; custom physics.

Revenant — commissioned site for a PC repair workshop, designed and shipped solo, in production: <https://ревенант.рф>

Demos and details: me.cryzothic.tech

WORK EXPERIENCE

Sed-Pro LLC — Barnaul — software division of a working architecture and engineering bureau

Lead Programmer, August 2025 — present

Programmer, December 2024 — August 2025

- Own tech stack, scoping and deadlines; hands-on lead with 1 (2) engineers reporting to me.
- Built an SQL-first platform: forms, widgets and button logic are defined in MySQL, the Qt Widgets client renders them — screens are reshaped on the fly, without C++ rebuilds.
- Automated the order-to-delivery pipeline for 30 designers (incl. chief project engineers): automatic project assembly, no manual file or task handoff.
- Designed svn-based, sheet-level file versioning (DWG, XLSX, PDF) and electronic document flow.

Industrial automation plant (NDA) — fuel-station tanker systems — Barnaul

Software Engineering Intern, February 2024 — March 2024

- Programmed and configured microcontrollers for fuel-tanker equipment; migrated a production server to Astra Linux (C#). Sensitive infrastructure under NDA.

SKILLS

C++, C++17/20, Qt, Qt Widgets, QML, OpenGL, EASTL, raylib, CMake, STL, Boost, MySQL, SQL, Git, Data structures and algorithms, Unreal Engine

EDUCATION

Altai State University College — Information Systems and Programming, Barnaul, 2023

Certificates 2022: Introduction to Programming (C++); C++ Programming; Game Development with Unreal Engine; Gamification: Introduction

ACHIEVEMENTS

- Laureate — Altai Krai Professional Skills Olympiad, CS and engineering track, 2023
- Diploma II degree — Regional IT olympiad RSO-IT'2023, Gorno-Altai State University
- Paper "Evolution of Point Defects in an FCC Crystal" — VI International Research and Practice Conference, Moscow, 2023; indexed in RSCI (eLibrary.ru)
- Hackathon Barnaul — participant, 2021

LANGUAGES

Russian — native; English — B2, upper-intermediate
